(RESPONSIBILITY FOR THE APPLICATION & APPROVAL RESTED UPON THE PURCHASER.)
- 7) WENDY'S AND CABINS IS NOT LIABLE FOR ANY DAMAGE TO A CABIN RESULTING FROM GROUND INSTABILITY OR MOVEMENT OFF A LOOSE BASE.

**Specifications** (*SABS Has different specifications*)**Base**

The stilts (Poles 100x125 diameter) are H4 CCA treated. H4 CCA treatment is specially for external use. The base frame is constructed from S5 grade timber 152 x 38 mm bearers. Main bearers are bolted to the stilts with 12mm treaded rod. Every stilt gets planted +- 500 mm deep and stands +- 700mm above ground, we can built up to 2.1m

**Floors**

The floor is a 17mm Tongue & Groove SA Pine which is fitted on to floor beams (114 x 38mm), spaced 420mm. The floor planks are fitted with 63 mm oval nails.

**Internal Walls**

The internal walls are manufactured from 38x76mm timber. The uprights of the internal walls are spaced 500 mm. After installation the frame gets cladged with 6mm Rhinoboard drywall.

**Wooden Wall Panels (Frame)**

The wall panels are manufactured with timber which is CCA treated. CCA treatment is a waterborne copper chrome arsenic preservative used for preserving timber. During the treatment process the three active ingredients carried into the wood by the water. Each has a T function to perform: Copper is the fungicide to prevent rot, Arsenic is the insecticide to prevent insect attack and Chrome fixes them both to the timber in a chemical reaction. When the treatment process is over and the timber is dry the fixation is permanent thus keeping the chemicals from washing out.

**Construction of wall panels**

The frame gets built with 38x76 mm timber, uprights are spaced 500 mm. On the external side of the frame it gets covered with CCA treated 32mm Log profile timber which is V5 grade, on the internal side of the frame sisolation (OPTIONAL EXTRA) gets fixed before 6 mm Rhinoboard drywalling is installed.

**Ceiling**

6 mm Rhinoboard ceiling with bishop strips is used, the ceiling board gets fitted onto the 38mm battens which are spaced 400 mm apart. The sisolation (OPTIONAL EXTRA) gets fitted into the roof cavity.

**Windows****Internal Doors & External Doors**

All internal doors are fitted in a pine door frames. The internal doors are standard masonite hollow door fitted with handles and locks. Aluminum Sliding Door 1.8mx2.1m(H) is fitted into a pine wooden frame. An extra extranal back door(pine solid wooden door, fitted in a pine frame) can be added at an extra fee.

**Roofs**

Engineer designed trusses, which is gang nailed are used for construction. Corrugated Iron 0.3mm / 0.4mm, Cromadek or 0.4 IBR sheet can be used.

**Treatment**

Although all timber is CCA treated (Specially for exterior use), the house gets painted with a wood sealant. We seal the exterior of the cabin with an oil sealant (WAKSOL F). Oil penetrates into the wood and stops it from drying out and crackeing. It waterproofs the wood completely. We apply the first coat of wood sealant. The sun and winds causes the oil to break down over time. Customers must re-apply wood sealant. Maintenace and material cost of WAKSOL F treatment is fairly low.

**We would like to bring to your attention that the National Treasury recently announced an increase in the Value-added Tax (VAT) rate from 14% to 15%. This will be effective from 1 April 2018. To comply with legislation, Wooden Cabins and Wendy's will be amending the VAT rate on the sale of all products products and services where VAT is applicable to 15% effective from 1 April 2018**
